

10 Tips for Loading Mobile Storage Unit

1. Distribute the weight evenly in your container, not all on one side.
2. Boxes should be filled completely and lids closed. Fill empty gaps of boxes with packing material.
3. Protect your items with bubble wrap and use storage blankets to protect furniture. It is your responsibility to make sure adequate packing and wrapping is used to protect your goods.
4. Pack heavy items in to small boxes to make lifting easier.
5. Always place heavy items at the bottom centre and place lighter items on top.
6. Use drawers to load soft unbreakable goods.
7. Secure the mobile storage unit when you are not in attendance with a secure padlock.
8. Prop and secure the (MSU) door open while you are loading to prevent it from closing unexpectedly.
9. Pack the unit in the same manner that you would pack a removal van, avoiding empty space and protecting furniture.
10. Use the inventory list to make note of where you have packed your goods to make it easier to keep track of your goods.
